## Advanced Dental Occlusion... A Simplified Approach That Yields Maximum Results

Beautiful, lifelike reproduction of teeth can be created with a variety of different materials and techniques, but what about function? To ensure long-term success, a greater understanding of occlusion is needed. At Klausz Dental Labs, we ensure that the beautiful smiles we create today will hold up to the rigors of mastication and occlusal forces in the future.

Teeth need to work and function in harmony with each other. They must provide for maximum interdigitation in function and working contacts. At the same time, they must allow for the free range of motion provided by the reduction of interferences in movement. This new millennium has brought together more precise articulators, so that in conjunction with simpler face bow procedures and a greater understanding of occlusal concepts, function can now be achieved with greater accuracy and consistency.

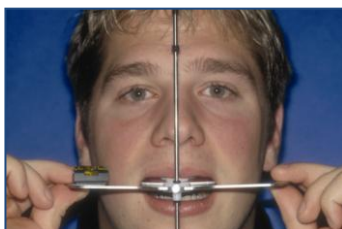

As a service to our clients, we have available an **Arcus Face Bow** and a **Kois Dento-Facial Analyzer** that we can lend to you. We have all the accessories available to take a registration. Contact the lab, prior to your patient's appointment, and we will gladly send it to your office. As well, we would be happy provide you with an in-office demonstration so you can see for yourself how easy it is to use and how much it can improve the quality of your work. Call us to arrange for your in-office demonstration. You'll be glad you did.
