"We Build Advanced Occlusal Concepts Into Everything We Do!"

We've grown into an O.I.C.S. Specialty Laboratory!

At **Klausz Dental Laboratories**, we are committed to providing our clients with a full range of services, restorations, and appliances to meet all aspects of clinical dentistry. To meet your expectations we have grown into an **Occlusal-Implant-Cosmetic-Sleep (O.I.C.S.) Specialty Laboratory** and we have solidified our position as a leader in these fields through various certifications.

With over 50 years of experience in the dental technology field, we build advanced occlusal concepts into every restoration and appliance we custom fabricate. It's with a greater understanding of how teeth, muscles and joints work together that we can create restorations that not only look lifelike and aesthetic, but can last longer and function better. Allow us to apply the knowledge we've accumulated into your next restoration or appliance. See why we've become an **O.I.C.S. Specialty Laboratory**.

Digital Dentistry at Klausz Dental Laboratories

We accept STL files from all of the most popular scanners

As technology is constantly changing, our laboratory is evolving to meet the changing needs of our clients. This is how we've been able to build and maintain relationships with our clients for over fifty years.

We are proud to announce that we've become a Medit Registered Laboratory, Cadent iTero Partner Laboratory, Trios - 3Shape Laboratory, and Cerec Affiliate Laboratory. And the list keeps growing!

We can accept all STL files that can be captured in your office.

Digital files sent to the lab allow us to create 3D printed models and fabricate your restorations and appliances to the highest quality possible with precision and accuracy.

We can accept all digital scans from clients who choose to go digital.

Ron Klausz is not just the owner of the company- He's also a sleep patient

Wanting to make sure his latest sleep appliance is working effectively to control his sleep apnea; Ron did a second, in clinic sleep test with his appliance in place.

After Ron's wife saw the picture of him with all the sleep apparatus on, she was heard saying, "No No ladies, stand back, I saw him first!"

You can count on us for knowledgeable advice on all types of OSA Appliances.

Klausz Dental Laboratories Implant Tip How to avoid food traps around implant restorations

When a natural tooth is lost and an implant placed, there is usually some type of bone loss which causes the tissue in the papilla region to recede. This in turn creates a space below the natural contact areas of teeth (Figure 1). More prevalent in the posterior quadrants, these areas can't be closed with the implant restoration as they fall into an undercut from the crown's path of insertion (Figure 2). The best way to avoid creating these potential food traps is by adjusting the contact areas of the natural teeth prior to taking the implant fixture impression. By reducing the enamel from the height of contour, the gingival embrasure below the contact will decrease in size (Figures 3 & 4). Looking for this potential problem at the onset can save quite a bit of time as well as discomfort for the patient.
